

Abstract

5 The invention relates to a method for producing
imidazolium salts by reacting bisimines or corresponding
heterocycles with a combination consisting of an
alkylating agent and of a metal salt serving as
10 promoters of the reaction. This method makes it possible
to obtain a multitude of imidazolium salts under mild
reaction conditions and in good yields. The imidazolium
salts produced from heterocycles constitute novel
compounds.
